

The COVID-19 Triple Play:

Three Keys to COVID Mitigation in Primary Care

There are many strategies and a lot of information out there related to COVID-19. With the winter holidays around the corner, focus on three essential areas for primary care to mitigate COVID-19 -- primary care's triple play. Below you will find the three essential focus areas and related links to guide your practice.

Vaccines

- [Order COVID-19 vaccines](#) on Thursdays between 8:00-4:00PM
- Fill out 5-11 Pediatric vaccine surveys during state allocation phase
- Outreach to patients to get them in for initial vaccines and [booster dose](#) appointments
- Refer patients to a [vaccinating site](#) or request a [mobile vaccination clinic](#) via this [form](#)

Testing

- Order free Point-of-Care tests in order to quickly diagnose patients
 - [Ordering form](#)
- Consider PCR testing for asymptomatic patients
 - Review [this webinar](#) (beginning at 51:00) for PCR testing options
- Use [this toolkit](#) to guide testing protocols and communication

Therapeutics

- Refer eligible patients for monoclonal antibody treatment
 - Refer in [CRISP](#) or use this [referral form](#)
- Prepare for the roll out of Molnupiravir, which will be [reviewed by the FDA](#) on 11/30, by ordering Point-of-Care tests to rapidly diagnose

With this triple play, we can send COVID-19 to the dugout!
